

—— SMART PROFESSIONAL VEHICLES

Utility vehicles became really useful:
quiet, compact and green.

WE GET THE JOB DONE

Have no doubt: our mobility is going electric. And the forerunner ? Small vans. Extremely useful in cities and municipalities, but also on vast industrial or recreational areas.

Silent, energy efficient and compact: the assets with which Addax rolls down the track speak for themselves. Combine this with a high degree of quality, and you have the utility fleet of tomorrow.

Your utility van is your friend at work, and to help you in your daily tasks, it must be robust, reliable and efficient. The new Addax chassis-cabin is set for the trip. The quality of its finishing, its driving agility and its comfort turn it into the tool you can't miss anymore.

Addax even switches up a gear: Equipments and fixtures tailored for your needs, and thanks to the 3G monitoring, you are in touch with a team of technicians whenever you need them.

And development, production and assembly are 100 percent Belgian ! This reliability makes it an attractive product for leasing or long-term renting.

Interesting for your government or organization? Call us at +32 56 36 50 05 or mail sales@addaxmotors.com and we'll make you a customized proposal.

Smart utility vehicles

Soon in your
industry, park
or municipality ?

Ask for our
leasing
offers.

01

**Tailored for
the user**

Adapted for your needs, your
van benefits from a
customized production.
Open or closed cargo
box, integrated cooling system,
convenient sorting fixture, or just
the chassis cab ?
Safe and comfortable: double
suspension, disc breaks,
peripheral ground vision, ...

02

**100 %
made in Belgium**

Development, research and
production are located in
Belgium. Unique.
And we are proud of it.

03

**Years of
expertise**

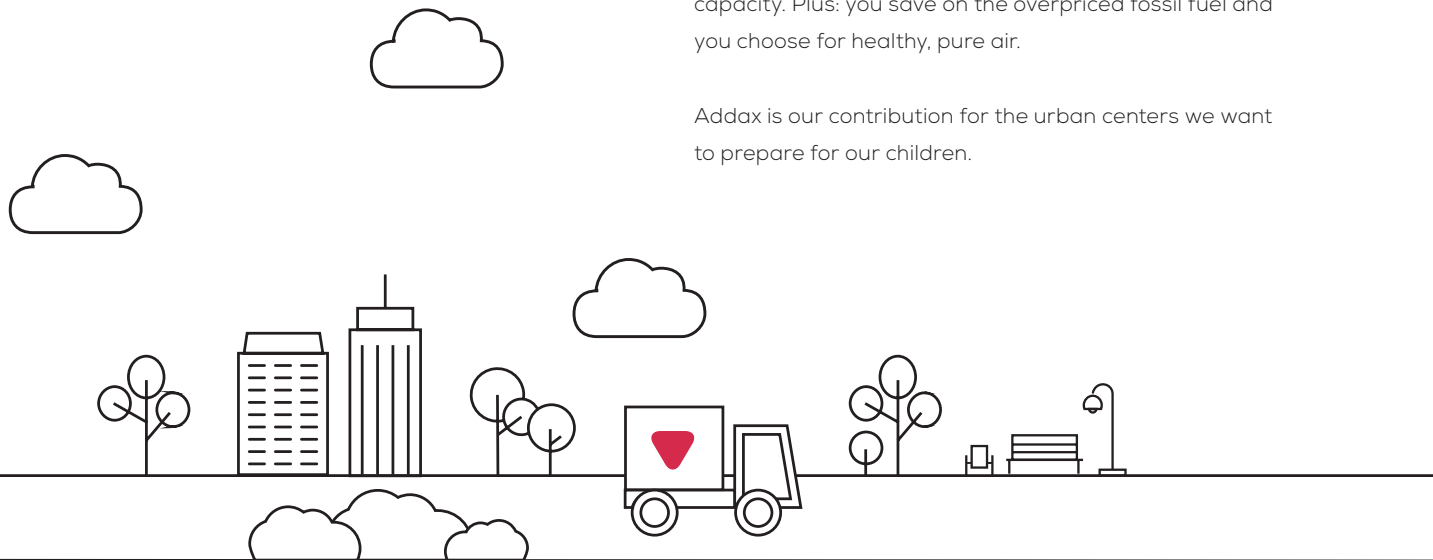

The Addax team is active
in vehicle rental since many
years also. We could use
this long experience to bring
best practices into our latest
developments. And of course
bring you the best leasing
packages.

04

**Remote monitoring,
onsite technicians**

Choosing 3G monitoring
allows you a direct
assistance and advice from
Addax. An accident ? A simple
call and a technician comes
immediately on the spot.
No waiting time, and for
your drivers: optimized
performances.

The city of tomorrow drives electric

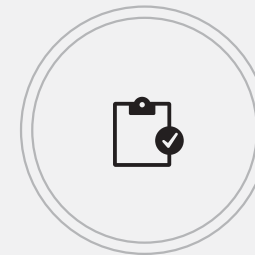

Noise pollution, toxic emissions, fine particles, parking problems ... cities and municipalities suffer a growing mobility pressure. We can't go ahead like this: the city of tomorrow is a city with less cars. And with electric utility vehicles.

Local economies, public services and green maintenance will continue to run. But run electric. And pleasantly silent. Using small compact trucks equipped with a large capacity. Plus: you save on the overpriced fossil fuel and you choose for healthy, pure air.

Addax is our contribution for the urban centers we want to prepare for our children.

ADDAX. WITH AN A, AS IN 'ALTERNATIVE'

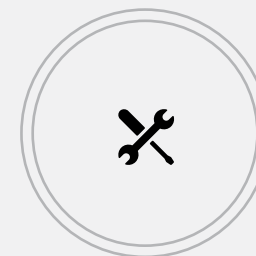

ALL-IN PURCHASE OR
LEASING CONTRACT

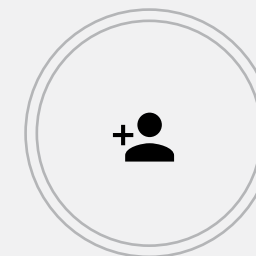

FIXED PRICE, NO RISK,
NO SURPRISE

100% GREEN

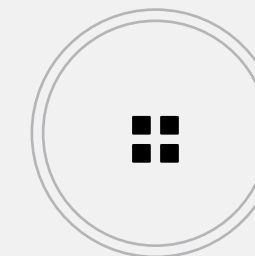

MAINTENANCE AND
REPAIRS ON-SITE

TAILORED FOR THE
USER'S NEEDS

FLEXIBLE BATTERY CHARGING
(SIMPLE PLUG, NO CHARGING STATION)

CUSTOMIZED
FEATURES

01

Cities and urbanised areas

An open body for the recycled waste collected by the maintenance team ?
A closed load area for a mobile kiddies club ?
Addax can do it all. In any street, any borough, any town. Compact and agile, but with an unprecedented loading capacity of 5 m³. And the clean air ? Every citizen will be more than grateful.

Amusement parks and green areas

Fun in child-friendly surroundings: Addax' green mobility not only looks cool, it is cool ! 100% silent, so that's a win-win straight away: extraordinary versatility in deployment and adding extra credibility to your eco-conscious image. Zero emission, zero air pollution.

02

Useful in every sector

Last-mile courier services

80 kilometers of driving range and the large size of the loading body offer extended versatility in any city. Quick delivery of up to 1,000 kg. Not just a couple of routes, but all day long. Back and forth, again and again. Addax is small enough to be used in alleyways, fast enough for periphery lanes.

03

04

Intra- & multi-site logistics

Durable, innovative and reliable. Addax represents all of these core values any future-oriented industry cherishes. Did you know that the total cost of an electric vehicle is smaller than that of a diesel-fuelled vehicle ? Of course our on-site full service package completes the picture.

"AT ADDAX, THE PRICE PER
KM OF ELECTRIC FREIGHT ON
SHORT DISTANCE IS MORE
THAN 10% LOWER THAN THAT
OF DIESEL EQUIVALENTS."

At Addax, the user comfort is essential, flexibility and user-friendliness are key words. To address growing demand and needs, we developed a unique concept of vehicle lease. It is your mobility that is guaranteed during all the contract duration. No extra costs, no surprises, all is known from the start.

With Addax, we offer you a mobility solution that is created and assembled in Belgium following the strictest standards of the industry, and by engineers specialized and with an internationally renowned experience. Addax Motors is the first Belgian manufacturer to develop and produce light electric vans. The company works with local partners for the implementation of some key tasks : part of the R&D of Addax is carried out in collaboration with Belgian universities and our leasing packages are offered through local experts that know well the electric market.

Endless possibilities for your Addax.
