# Nature's solution for food's future

## Engineering sustainable food solutions for all

As a food-tech company, Algama harvests the potential of algae to create food that's good for both people and the planet.

**Algama's goal is to feed  
10 billion people by 2050,  
while preserving the planet  
and offering consumers  
additional and better  
choices in foods.**

**EDITO  
BY ALVYN SEVERIEN**

Alwyn Severien,  
Cofounder & CEO

**We are convinced that the biological potential of algae offers multiple opportunities for biotechnological and food applications.**

This capacity is still mainly untapped, yet algae can provide food ingredients that are highly beneficial for both humans and the planet.

With this in mind, Algama has been committed to harnessing this potential and making it available to the consumer. Algama does it by bringing together expertises in biology, processes, food engineering and entrepreneurial strategy. Thanks to this cutting-edge know-how, we manage to create a healthy, sustainable and, moreover, tasty food.

We are committed to achieve a great impact in the food sector, thanks to our team, united around the same values: human, innovation, protection of the environment, and focus on the essential.

Industrial, distributors, entrepreneurs and impact investors, we are always happy to discuss.

The background features a white surface with large, colorful, abstract shapes in shades of green, orange, yellow, and blue. In the center, there are three small, dark brown bowls filled with a light-colored, chunky food product. The bowls are arranged in a triangular pattern and are labeled with circled numbers: (1) at the top, (2) at the bottom left, and (3) at the bottom right. A silver spoon is placed in the bowl labeled (2).

## Develop next-generation of healthy food products

Algama stays tuned in to consumers food habits and preferences, and co-brands innovative and tasty products they'll crave.

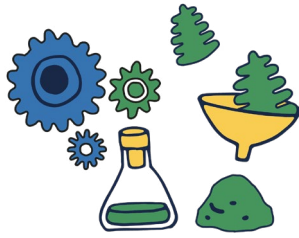

## At the beginning there are algae...

Our story begins with algae, which, thanks to their exceptional protein content can play a key role in the world food supply ... and it continues with the conviction that we must feed the greatest number of people while protecting the environment with affordable and healthy products. It's just the beginning.

All the team and our research partners (CNRS, INRAe) are dedicated to innovate and make microalgae a key resources for tomorrow's daily food.

## OUR OFFER

Process

Development of ingredients

Formulation from A to Z

# From biomass to ... consumers

We explore plant-based products, still largely unknown, and we build with you the food innovations of the future. Making algae an alternative to animal protein.

Thanks to our scientific and technical expertise, we make algae an alternative to animal protein. We rely on fundamental research, the selection of new strains, the search for new ingredients and their formulation and the co-creation and industrialization of finished products with partners.

## OUR VALUES

### Share

Share a more positive vision for food and provide technological expertise to companies in the agribusiness sector.

### Democratize

Democratize plant-based proteins by focusing on companies that are capable of industrializing and distributing on a large scale.

### Pioneer

Pioneer food innovations in high-growth markets. proteins by focusing on companies that are capable of industrializing and distributing on a large scale.

### Human

Humans first! At Algama, we are convinced that we can change the world of food, with the ambition to feed as many people as possible.

### Food innovation

We innovate through science, technology and knowledge to create products based on algae proteins, which are an excellent alternative to animal protein.

### Protection

We are obsessed with creating biobased products. We believe that nature has what it takes to healthily feed people, without exploit animals. Let's protect it!

### Essential

We no longer have the time to wait to find bio-sourced food solutions that are healthy for consumers and more respectful of the environment.
