EASY STEAM

It is all about maintaining quality, flavor and nutritional value

Best in class microwave packaging.

- Due to a better circulation meals are steamed to perfection. Optimal flavor, nutrition retention, and a crunchy bite are ensured.
- Fool proof, no piercing of holes, and with an easy peel of top seal.
- Temper evident closure
- Quick and fast; ready in minutes

EASY STEAM

It is all about maintaining quality, flavor and nutritional value

Best in class microwave packaging.

- Easy to operate
- Standard sealing of top film
- Perfectly smooth top
- Temper evident closure
- Last but not least; cost effective

EASY STEAM

It is all about maintaining quality, flavor and nutritional value

HOW DOES IT WORK?

The easy steam has a built-in valve in the rim.

The valve allows for controlled pressure build-up during filling, heating or cooking of meals.

The patented system steams the meals to perfection and ensures optimal flavor and nutrition retention and a crunchy bite and *ready in minutes*.

EASY STEAM

It is all about maintaining quality, flavor and nutritional value

FOR THE BEST TASTE EVER

Heating up pre-cooked meals is an important step in achieving a tasty meal. No positive- or negative pressure. *A controlled release of air for the best taste.*

Piercing too many, or not enough holes is now a thing of the past. The meal is heated under the best conditions; not too dry or too sticky

EASY STEAM

It is all about maintaining quality, flavor and nutritional value

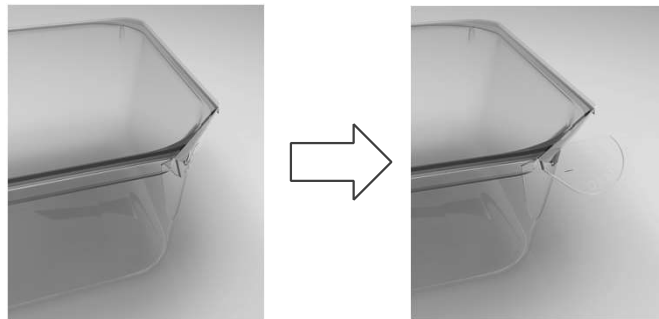

SIMPLE TO OPERATE

In case the meal is pre-cooked, the tray can be sealed with the smart EasySteam Valve controlling the excess pressure.

Once cooled down sufficiently, the valve can be closed.

Thus there is less chance for contamination.

The tamper-evident closure guarantees the one-time use. Before the end user heats up the meal, the tamper-evident seal needs to be broken. The meal can now be put in the microwave. A simple operation.

SUMMARY

- For delicious meals or meal components; best in class for taste, nutrients and it is fast
- Easy peel film
- Temper evident closure
- Mono material, sustainable and circular 100% recyclable
- Save up to 50% in weight reduction
- Can be produced both in IM and thermoforming
- IP protected (PCT) and a Design Protection
- LCA is available on request
- Temper evident closure
- Cost effective
