

About BeesMAX

Our mission is to deliver solutions to reverse the rapidly declining UK bee population.

BeesMAX provide secure homes for urban swarms and surplus bees from urban colonies, releasing them into the wild to prosper and work with nature to rejuvenate the local areas.

BeesMAX is a not-for-profit company working with schools and companies to increase interest, educate and help the bee population fight back.

It is the use of pesticides, monoculture farming and our deteriorating environment that have caused their current decline in numbers.

BeesMAX

A new, exciting & innovative way to teach STEM subjects

We provide a new and innovative way to teach the Science, Technology, Engineering and Maths (STEM) subjects.

We promote bee friendly sample lesson plans as teaching aids to accompany our beekeeping services.

For more information and to arrange a site survey please call or text us on: **01372 702 337**
Alternatively email us at: bees@beesmax.org

Schools & Education

Finding new and inspirational ways to teach Science, Technology and Engineering can be a challenge. We address these challenges by touching on all these subjects whilst your pupils also learn about wildlife and the environment. Plus, at the same time, you'll be helping to regenerate the UK bee population.

BeesMAX provides a wide range of beekeeping services for schools, ranging from the data only service or the small IT-enabled Junior Colony to the much larger Senior Colony that will produce enough honey to eat.

Because of the time and resources required to manage larger colonies, we recommend schools and educational establishments initially try our Junior Bee Hive service.

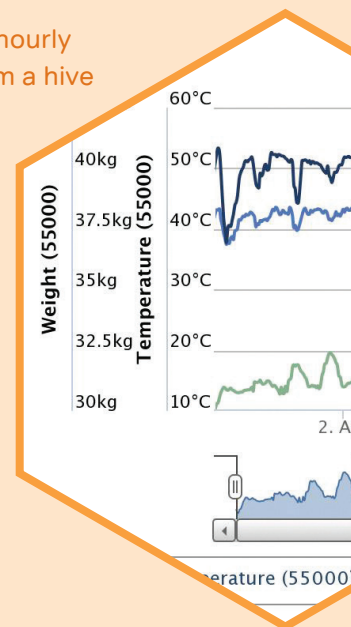

However, if you are at an advanced stage with your own apiary development, then the British Beekeepers Association (BBKA) can assist in this process through their local club network. We will network your school into their national education programme at a local level.

Summary of Our Three Services

BeesMAX provides all the necessary equipment and materials within our annual fees as a totally outsourced service. Our three services are:

- The IT Data Service; half hourly information gathered from a hive returned as a graphical display with sample lesson plans
- The Junior Hive; colony of bees, their home, The IT Data Service and ongoing hive management
- The Senior Hive; interactive apiary management with bottling of the honey, and The IT Data Service

Our Junior Bee Hive Service is a free-range style of beekeeping as they are not:

- Intentionally grown to produce many pounds of liquid honey for our consumption
- Manipulated and grown on to become the familiar tall urban cottage hive
- Solely for our benefit but saved for environmental renewal and regeneration

For more information and to arrange a site survey please call or text us on: **01372 702 337**
