

WHY MEDIBINEE?

Motivating & low-threshold

By rewarding with a coupon and a proactive invitation to return used medicine, we nudge users to act.

Reducing wastewater pollution

Residues of medication enter the waste water when outdated medication is disposed of into the canalisation. medibinee creates awareness and offers a concrete action on how to dispose of medicine.

Appropriate disposal

Where to dispose of old pills? In Germany, there is no one-fits-all solution. To set a new standard and create a longterm, sustainable solution, medibinee was developed.
