

SMART ESG & INFRASTRUCTURE FINANCE BIG DATA AND SECURITIZATION ON ONE CHASSIS,

Blockchain Triangle has developed patent-pending technology that provides administrative and big data efficiencies to facilitate information transfer from operating assets to asset managers following an ESG Mandate.

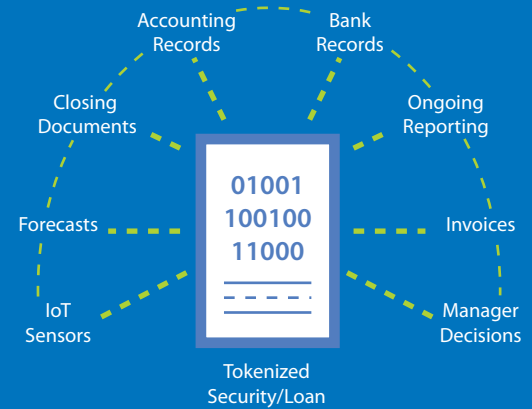

By combining Big Data and Securitization on one chassis, BCT's platform for securitization delivers transparency to investors, and automatic, secure and real-time processing for issuers. Costs are reduced for securitization with data analytics for investors, insurers and researchers. The initial market focus is to provide data solutions to ESG, Climate and Infrastructure Finance markets.

ESG & Infrastructure Data Management System

Blockchain Triangle's Platform includes core modules for regulatory and securitization processing, with API tools for Smart Meter, IoT and Smart Payment integration. This provides transparency and accountability allowing for the seamless flow of information to Asset Managers, Issuers & Sponsors, Credit Agencies, Insurers and Research Partners.

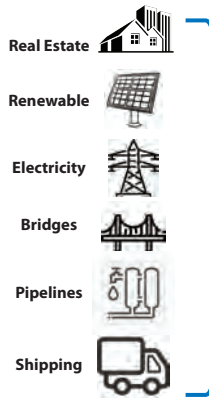

Blockchain Triangle sits at the center of an ocean of information that synchronously delivers pragmatic solutions to issuers and investors.

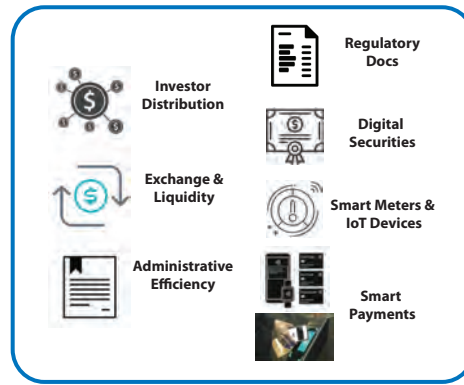

Data Architecture

Blockchain Triangle's Digital Infrastructure Platform includes an API framework that delivers straight through processing of asset performance and governance information thereby reducing annual administration, reporting and trustee costs while providing end investors clarity and certainty relative to mandates. This system allows for seamless information flow to Issuers, Investors, Insurers and Researchers.
