

Mushroom® Packaging 100% home and marine compostable

We're here to replace plastic foam and leave the world better for generations to come

MycoComposite[™]

Ingredients | Hemp hurd + mycelium Home-Compost | 30 days Marine -Compost | 180 days

100% home-compostable. No industrial composting required. Simply break into small pieces and place them outside in the soil, allowing nutrients to return to the Earth.

byproduct

MycoComposite[™]

Why MycoComposite[™]?

+ | Replacing plastic foam with a 100% natural and home-compostable alternative

- + | Zero waste
- + | Protective
- + | Insulating Sound & temperature
- Water-resistant
- + | Fire-retardant
- + | Light
- + | Scalable in any size, shape
- + | Carbon capturing
- + | Upcycling agricultural waste
- + | With a unique feel and velvet touch
- + | Future-proofing your brand

How do we grow?

We design your dream into a render taking into account the Mushroom Packaging design considerations.

CAD

We make a negative of the design as the mother mould and thermoform as many as needed standard size multi-cavity growth trays from that.

Each product grows in one cavity in one week. Depending on the time Fill Parts with Hemp and Mycelium available, we manufacture

Thermoform Growth Trays

as little as possible moulds, and reuse them.

The growing process is stopped in our drying chambers. Et voila, here is your home-compostable

product

Pricing

Our pricing is based on many variables, such as the design, size of the packaging, quantity, delivery time. We work with you to ensure the lowest cost solution possible.

And if you decide to work with us, below are the set-up costs to keep in mind:

Prototyping €575 per each unique design **Official order** € 600 per each unique design mother mould contribution **Transport** of the order (depending on location)

We do our utmost to keep our prices competitive every day. However, as for our company principle, "use as little as possible packaging to minimize CO2 footprint"

Preliminary Price Offer | 1 week Tell us your

- product dimensions
- type of packaging
- estimated volume

We will come back to you as soon as possible

Design & Prototype | 3 - 4 weeks We build your idea into a design, 3D print the mould, grow your first prototype in it, and send it to you for review.

Actual Order

Using standard size multi-cavity growth trays with as many cavities as we can fit. We re-fill the moulds on a weekly basis.

No MOQ

Duration: 1 packaging grows in 1 week, the more packaging needed in 1 week, the more moulds we would buy.

Packaging types to consider

Considerations for your designs while working with **Mushroom® Packaging**

Draft Angles

There should be at least a 3-degree draft angle on all vertical walls so that the part will more easily pop out of the mould.

Wall Thickness

The walls should have a minimum thickness of 15 mm to ensure they are structurally sound.

Edges

Every edge should have a fillet with a minimum radius of 4mm to achieve a smooth surface with the substrate.

Flat side

Each part should have one side completely flat which is the filling side of the mould.

ATTRIBUTE	STANDARD	Performance
Compressive strength [kPa,10% Compression]	ASTM D695	2,1 - 46
Compressive strength [x105 Pa,50% Compression]	ASTM D695	4,9-17,9
Flexural strength [x105 Pa]	ASTM D3575	1,4-1,9
Elastic modulus [x106 Pa]	ASTM D3575	1,4-1,7
Density [kg/m3]	AVANS*	115,5
Thermal conductivity [W/m*K]	ASTM C155	0,05760
Water absorption [Class Vapor Retarder]	ASTM E96	Class 1
Water vapor transmission rate [metric perm]	ASTM E96	0,013 - 0,02
Fire resistance [Class]	ASTM E84	Class A
Flame spread [-]	ASTM E84	20
Smoke developed [-]	ASTM E84	50
Aldehyde & VOC emissions [ppm]	ASTM E1333	<0,01-0,03
Peak deceleration [g]	75cm drop-5cm cushion 6,8kPa, avg of 2-4th drops	61

Mycelium products (aka Mushroom Packaging) is a biomaterial developed and patented by Ecovative Design, LLC. Cushioning, structural and thermal conductivity tests performed by Ecovative Design Labs. Testing for fire properties conducted by the Packaging Science Department at Rochester Institute of Technology. * Density tests performed by AVANS University of Applies Sciences
