

Mantle

A platform optimizing carbon sequestration and renewable energy finance

Supported projects and assets

How it works

Assets are verified, fractionalized, and tokens are issued on the platform which can be purchased (and later traded) by individuals, corporated, and investors

Benefits of using Mantle

- **Decentralized.** Project and asset owners can raise finance directly and do not need to go through any inefficient middlemen.
- **Time and cost efficient.** Token payment is received rapidly and at a low cost to the issuer.
- **Transparent.** All parties to a transaction conducted on the platform are vetted, all transactions are recorded on an immutable ledger, and all projects are verified on according to several criteria.
