A man with sunglasses and a mustache is in the foreground, looking out at the Statue of Liberty. The statue is in the background, standing on a small island in the water. The sky is cloudy and the water is dark.

## Message From Our Chairman

### A CAPTAIN WITH A VISION

As an explorer and perpetual tinkerer, I've been driven by this question, "Is it possible to explore the world without refueling and without the physical demands of traditional sailing?" Yes! The Nova Luxe suite of power catamarans are the answer.

Designed to be operated by a single captain. Nova Luxe cannot be matched by customary sailing methods. The efficient cruising speed is faster than traditional monohulls and Nova Luxe offers unlimited range. Two of the three hulls we offer exceed 15 knots.

As a nature enthusiast, I go out of my way to reduce my carbon footprint and rebuild natural habitats. As a successful businessman, I understand that economics drive consumer buying behavior. Nova Luxe is zero emission and the price is competitive with conventional propulsion. If you don't share my passion for the environment, no problem. The merits of this yacht will win over those who simply want the best!

With a Nova Luxe yacht exploring the world is an option. Budgeting for fuel or waiting for the wind won't be a concern. We are the first company to build an all electric yacht at a reasonable price point that is a joy to command. We build a yacht that enhances performance and our offer is complete yachting autonomy. Those features will be standard in 10 years but since life is short, we can't wait. If we ever meet, it won't be in New York City's concrete jungle.

## Our Company

PROVEN TECHNOLOGY ON THE EDGE

Elon Musk believes all combustion engines will be replaced with more capable electric engines. He and many other electronic pioneers, like our partner Torqeedo, have created the equipment to make this possible. We have integrated these advancements in the new Aquila 44 by Nova Luxe.

When you command one, you'll understand how the Wright brothers felt when they first took flight, you'll know it's a special product, one that will change a long and storied industry for the better.

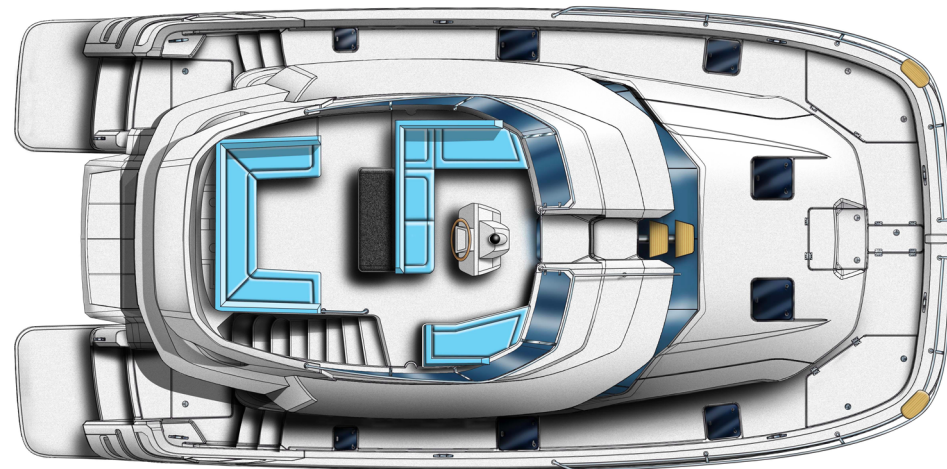

## Our Difference

Redesigned to accommodate a complete electric propulsion system with solar charging, the Aquila 44 by Nova Luxe uses the best-proven technologies at a price point never before seen. We offer a product that can do everything you would typically expect from a yacht of this class. The difference is that you can do more with the Aquila 44 by Nova Luxe than you may have dreamed possible. Unlimited range, silent motion, no engine vibration, no odor, carbon free emissions and elegant, large cabins are just the beginning. Fully Customizable form, optimized for function, and luxury standard, this is Nova Luxe.

*Manufacturing facilities are certified by DNV-GL for ISO 9001 standard.*

## Sustainable/ Eco

Our yachts are fully electric and rechargeable by renewable resources; sunlight, wind and water currents.

## Fully Electric Motors

Torqueedo electric motors are proven in the water. Many yachts have converted their diesel engines to Torqueedo. Nova Luxe yachts are optimized for electric.

## Solar Panels

With a 4,000-watt solar panel system, the array can sustain the ship's energy needs while sending additional power to the ship's propulsion system. An optional 3,000-watt solar panel system on the aft deck can be added and of course the panels are best in class, 23.7% efficient.

## Generator

A 25kW Whisperpower generator ensures that you will have the power when you need it. Dock power, solar power, wind power, tidal generated power and finally generator power will be sufficient for all your yachting needs.

## Efficient Hull Design

The semi displacement catamaran hull we selected provides great lift, stability and load bearing capability.

## BMW Marine Batteries

The same battery that stores the energy for performance i3 vehicles will power your yacht. Warranty is for 9 years.

## Wind Turbines

Optional twin turbines offer diversified power generating capabilities. They can generate power during a windy night and while underway.

## Extra Tech

The electrical system self monitors for irregularities. It continually updates range and power consumption based on usage. Virtual anchor, 'station keeping' is optional.

# NOVALUXE

## Our Value

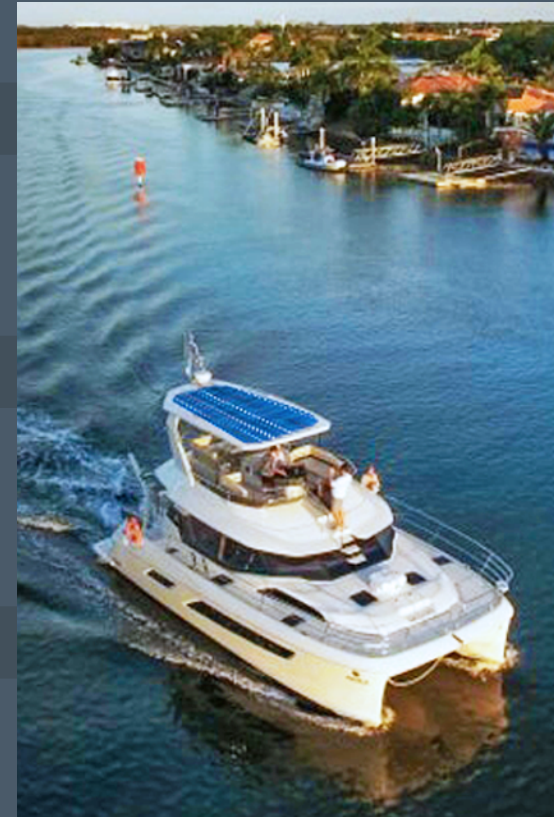

HIGH END QUALITY & SERVICES

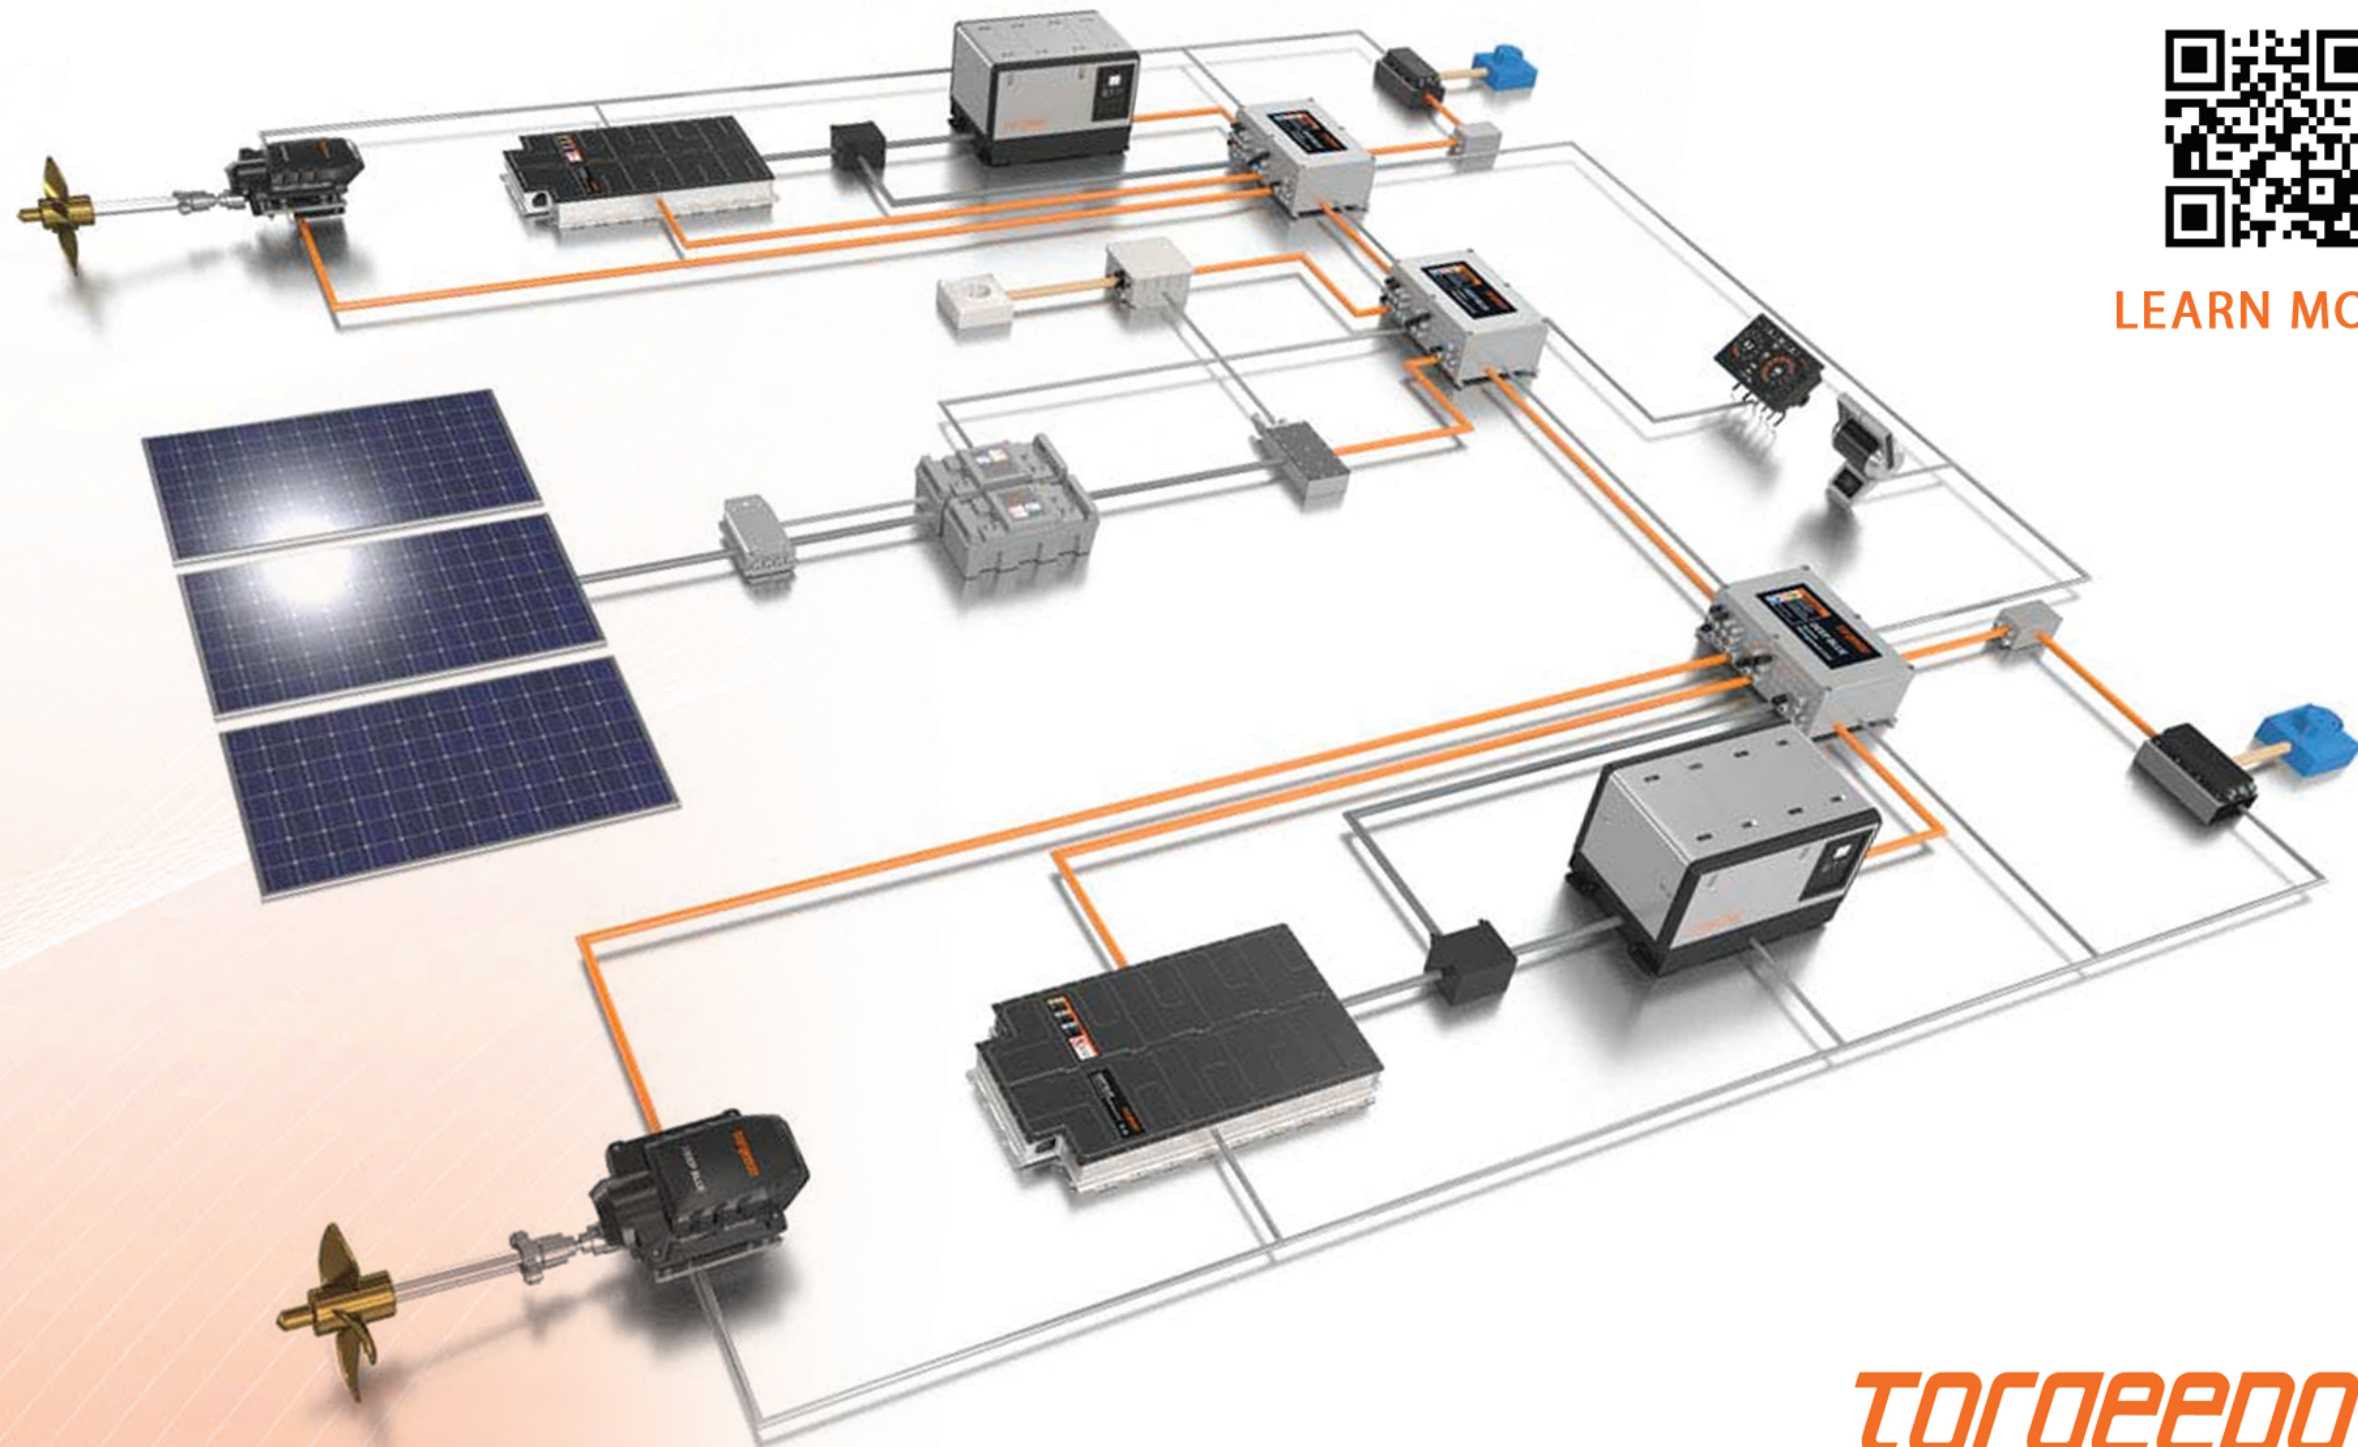

Our hull is manufactured by MarineMax. These hulls are specially designed to maximize stability and safety in the most inclement conditions. Our technical team is continually working to optimize weight ratios to further improve performance across the range. Nova Luxe Yachts has established a partnership with Torqeedo the manufacturer of the industry's leading electrical propulsion system.

The 44 foot power catamaran that delivers all the space, stability and comforts of a 50-foot mono-hull. Inspired by the space and luxury of fine villas, this remarkable catamaran delivers exceptional comfort and performance at sea.

No other power catamaran of its size delivers the space, comfort, safety and performance with an unlimited range.

## Our Journey

BEGIN WITH THE END IN MIND

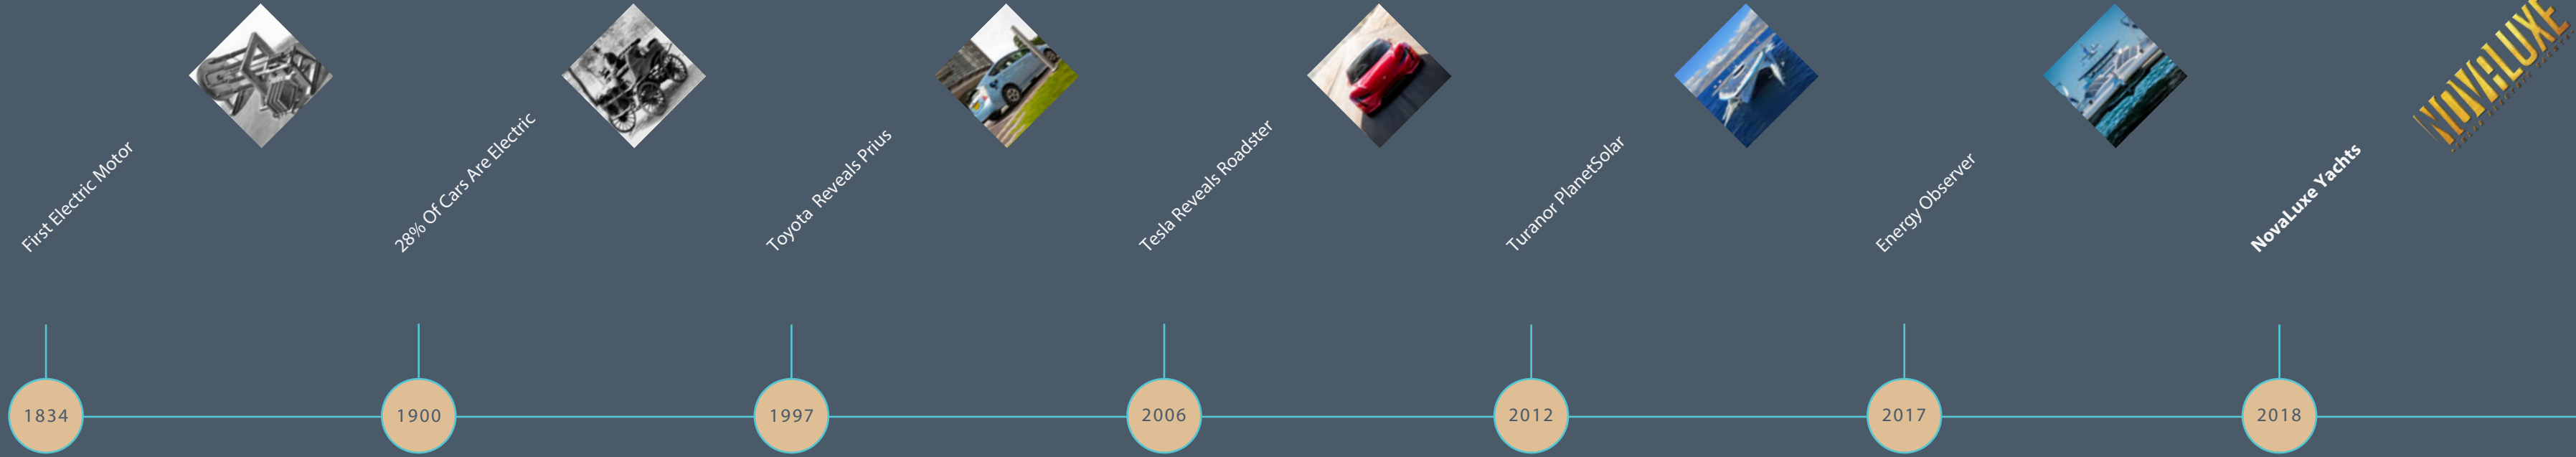

Today, you can ‘go green’ without sacrificing power and speed. If you decide to go electric you will get more than what's possible with diesel. You become self sufficient. A source of power instead of only a consumer. Your world will expand and the limits on exploration disappear.

We’ve always known of destinations just outside the sphere of possible. Those places, seen by few, are the places we'll go. They are the places Charles Darwin wrote about and the places Christopher Columbus stumbled upon.

Nova Luxe yachts are off-the-grid, unstoppable exploring machines. And of course, well appointed. Board a '44 and you will feel the difference.

## Our Environment

### PRESERVING OUR OCEANS & REEFS

The world today is different and will continue to change. To see natural beauty you need to travel off the beaten path. When you find the oasis you have been searching for, cruise in silently, observe the wildlife and leave without a footprint of diesel, oil, or CO2.

The Great Barrier Reef and reefs all around the world are under stress. A healthy reef is a true wonder. Now is the time to see them and we have the ability to do so without polluting them. With your help we can transition to a cleaner planet. Our goal is not to sell 10 boats or 100 boats but to change the marine industry forever. The world is a beautiful place; Nova Luxe Yachts strives to keep it that way by not polluting.

★★★★★

## Our Vision

BRIGHTER, BOLDER HORIZONS

At Nova Luxe Yachts, we see a future that isn't dependent on combustible fuel. A future that doesn't come at great expense and doesn't harm or pollute.

We have all of the resources and tools to harness renewable power available to us. It's time we truly embrace them and change the world for the better.

Join us in this expedition and share our vision.
