

The GreenGO (One-Page description)

The GreenGO is stationary bicycle that transforms human energy to electricity during workout. The GreenGo has two output-based technologies, one for self-feed in system that uses energy inside home system or battery charging system that charges smart home batteries (like tesla power wall). Unique ground-developed technology that uses newest torque-less axial flux permanent magnets generators and new inverter technology enables B2C direct-customers' business model and unique B2B business model. Fitness active people, environmental friendly people, hotels, gyms, off-grid objects and energy saving companies, they are all customers for this unique products.

The GreenGO: Is unique technology developed by engineers who have more than 13 years of unique worldwide experience in development of low rotation power producing machines and products. The patented pedal resistance of driving system, unique experience of the engineering team and successfully tested prototypes are the best guarantee for success of this product.

Product models and prices:

No.	Model/Product	Production price FOB China (EUR)	Sales price - Germany (EUR)	Features
1.	The GrenGO ECONOMY	340,00	649,00	Measure power, angle and vibration, have triple alarm, self-powered, and have radar...
2.	The GrenGO BASIC	650,00	1199,00	Same features like module.
3.	The GrenGO PRO	830,00	1499,00	Same features like module and wheel + board.
4.	Royalty fee - Tech transfer	0,00	30,00	Technology transfer to stationary bicycle producers. Price defined per bicycle.
5.	App PREMIUM membership		2 EUR/month 10 EUR/year	No ads, advanced muscle analyze comparison, smart TV gate, bicycle pedal resistance maps, medical recovery programs access...
