

The bikeBRAINO (One-Page description)

The bikeBRAINO is smart, self-powered, Bluetooth connected, bottom bracket power meter with unique triple alarm. The bikeBRAINO converts any bicycle to a smart bicycle, enables any cyclist to measure his full power performances of the both legs and enables unique muscle analyze. Integrated inside sharing bicycles bikeBRAINO detects any unappropriated action on the bicycle, protects bicycle, extends bike-share market and enables private renting bicycle service (called “Airbnb for bicycles”). This patented device enables bicycle paths transfer between normal bicycles and stationary bicycles with the real pedal resistance and uses smart phone as a bicycle computer. Unique ground-developed technology that uses newest low energy hi-tech sensors and chips enables B2B model of direct technology transfer to bicycle with special bicycle producers and makes their products smart.

The bicycle-sharing market is the exponentially growing market with billions USD invested. Up to now, all bike-sharing companies have the same control problems that could be solved by bikeBRAINO device. Besides protection, warning, and intelligent recording functions, the bikeBRAINO extends bicycle sharing market to fitness and cycling active people and enables private bike-sharing services.
