

# FROM THE COLLECTOR SEAMLESSLY TO THE PROCESSOR

The platform that matches collectors with processors for a smarter way to deal with waste and recycling.

SELIGO is an online transaction and services platform for waste professionals

Waste to get rid of?  
SELIGO finds the nearest site with capacity, however big or small, **saving you money and driving efficiency.**

Spare treatment capacity at your processing centre? **SELIGO makes you visible to those needing your services.**

Use our simple, **secure online platform** to streamline compliance procedures and **simplify transactions.**

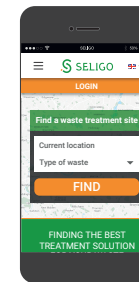

## THREE STEPS TO SMARTER WASTE MANAGEMENT

1

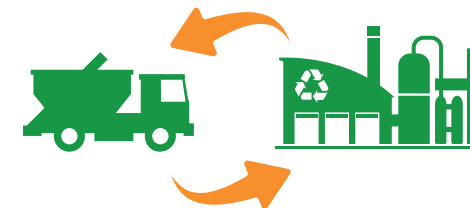

**SELIGO finds the nearest processing centres with available capacity;** the waste collector selects the centre which best suits their needs and budget.

2

Waste collectors have a validated profile which allows them to **book treatment** and other services **quickly and easily** through our platform.

3

Waste is taken to the treatment centre and checked. Our platform makes short work of invoicing, **payment is made for each delivery.**

*"Bringing Waste Collectors and Processors Together"*

*"Having worked for many years in the waste and recycling industry, I know that a more streamlined relationship between collectors and processing centres can exist. That's why we created SELIGO: a website and app that matches collectors to processors with capacity, however marginal. SELIGO improves economic margins and reduces environmental impact for both parties and have eliminated the need for costly, time-consuming validation procedures as SELIGO allows you to manage compliance and payment transactions in a secure environment. It's better for business and better for the environment.."*

**Thomas Paris**, Founder

## From the Collector seamlessly to the Processor

There are still obstacles preventing the optimum approach to waste treatment and recycling. In Europe only 41% of waste was fully treated or recycled in 2015!

**SELIGO aims to improve this situation by streamlining the relationship between waste collectors and processing centres.**
