

# 2021 Top 5 accomplishments

STAC Technology has made big strides during 2021. Read more about the top 5 things, among other important events, that happened to us during 2021.

## 1. STAC'S TECHNOLOGY - *TOUGHER TO DEVELOP THAN WE THOUGHT*

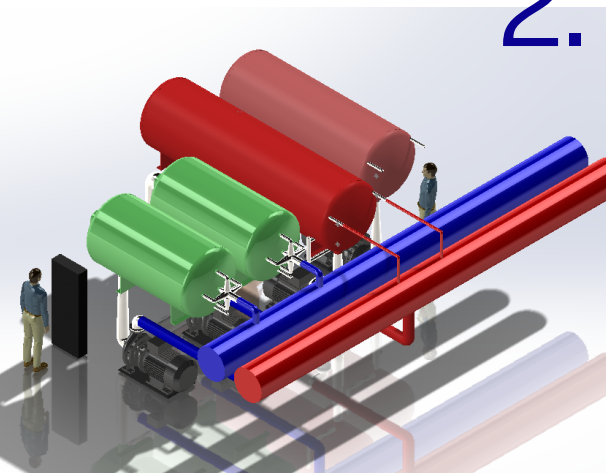

Our tech development partner in the USA, Brayton Energy, told us recently that they had underestimated the task of making STAC's turbocompressor - "It is even more complicated than the jet engine we recently delivered to GE!".

## 2. WORLD'S FIRST WATER BASED CHILLER

To quote Peter Diamandis: "The day before something is a breakthrough, it's a crazy idea."

Using water for large scale cooling has for the last 50 years been considered a crazy idea mainly from cost and technical perspectives... With the global warming and the phase-out of synthetic refrigerants that perception is now changing and STAC is the front-runner making that breakthrough.

## 3. CLEAN TECH OPEN WINNER

Participating in the world's biggest and most challenging Clean Tech competition has been on the wish-list and to-do-list for several years. With Bobby Svenning joining STAC earlier in 2021 the opportunity presented itself and we won!

## 4. STAC: AMONG THE 5 BEST IN THE USA

To be recognised among the 5 best Clean Tech companies in the USA is, humbly put, a huge honor. We are immensely proud to have our unique cooling solutions attracting such high-level traction and we are looking forward to starting operations from Boston, Massachusetts early in 2022.

## 5. EIC GRANT

On December 16th it was announced that STAC Technology has been selected to be one of the 99 companies receiving an EIC grant. Originally approx. 4.000 companies applied for an EIC Grant. STAC is very proud becoming a part of the European Innovation Council's flagship programme supporting game-changing innovations.
