

Smart IOT solutions for Green buildings

Commercial buildings represent most of the consumption, and a large savings potential

Commercial buildings > **60% of the world energy consumption**

**Potential
savings (15%)**

~ 200 TWh	~ 230 TWh	~ 130 TWh	~ 130 TWh	~ 125 TWh
9-10 € Cts	25-30 € Cts	11-12 € Cts	20-22 € Cts	18-20 € Cts
3 B€	8,5 B€	2,5 B€	4 B€	3,5 B€

Overall opportunity of 20 B€ savings!

However, no real solution for energy control in multi site environment

Issues with current solutions

- Difficult to manage network of **heterogeneous buildings**
- Many **single site views**, rare to have multi site control
- Usually **complicated** to deploy and to use
- **Long pay backs**
- Do not manage **users comfort**

Energy management: some customers feedback

« I don't understand my energy bills »

«I feel there are many billing errors, but I have no time nor ressources to check it all »

« I need simple solutions, easy to deploy, and with a short payback, especially for my small sites. »

« We want to put in place a multi year energy saving plan, but we do not know where to start from... »

« I'll probably need several solutions, eventually from different vendors, but I need just one interface»

We have an efficient and simple solution, delivering fast results

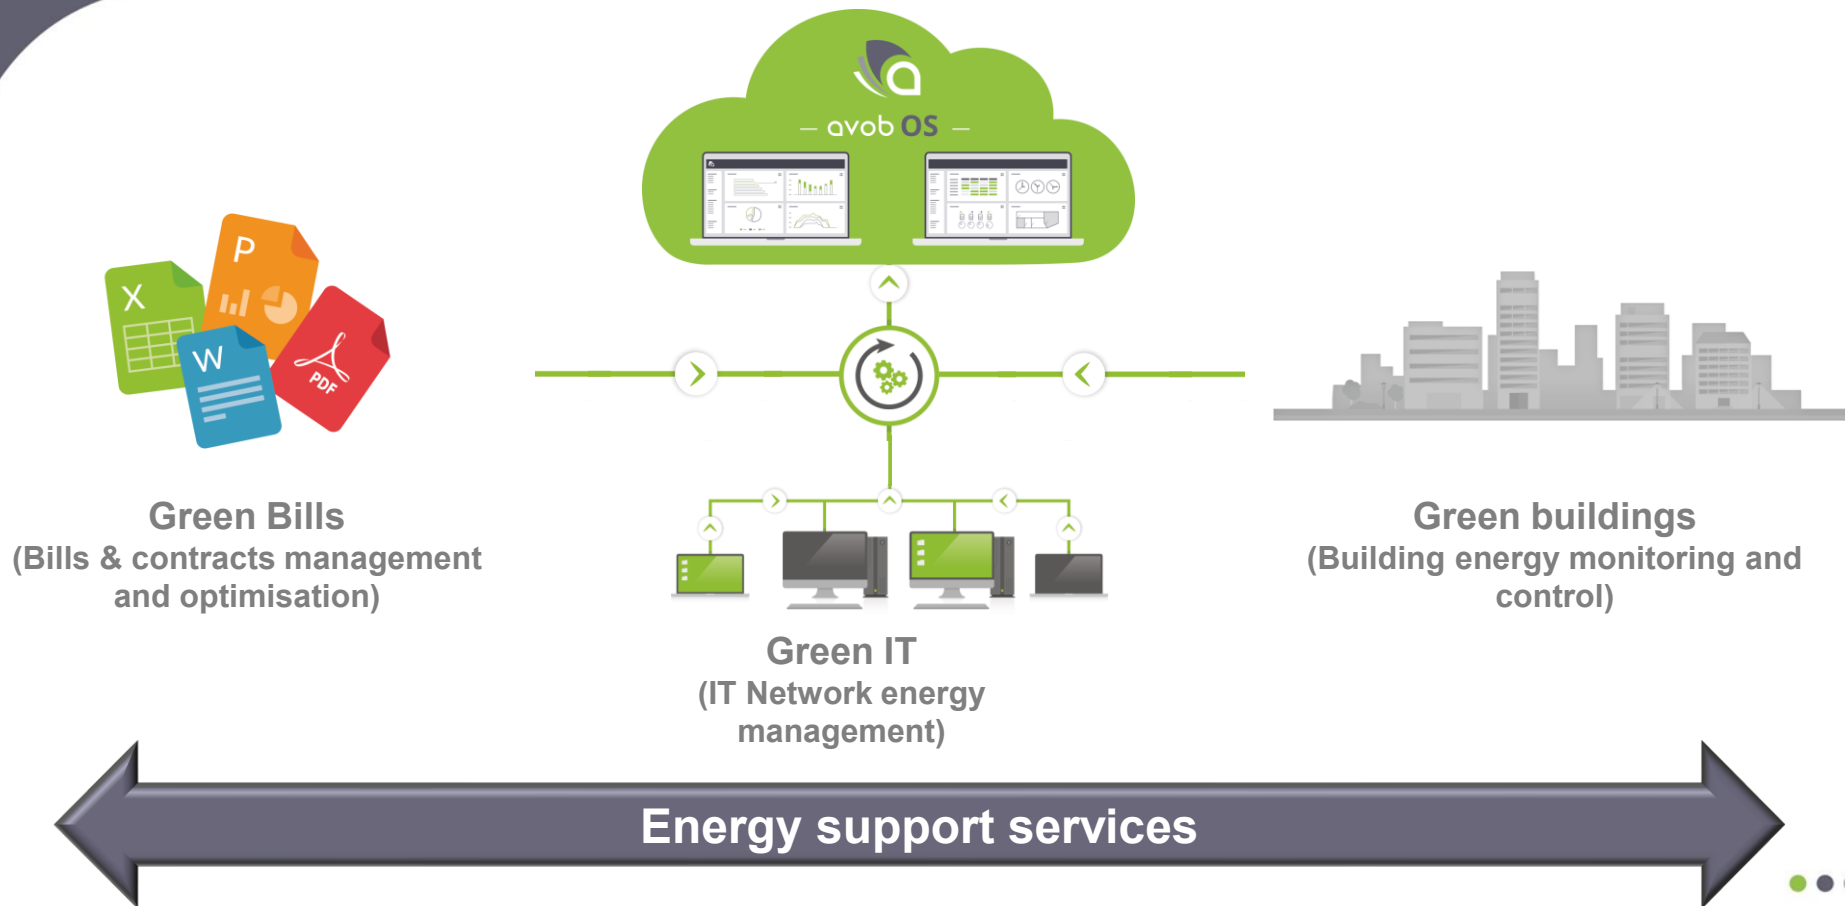

AVOB has developed a powerful platform ...

- Cloud based **SAAS platform** with powerful **Energy Data Analytics** and **smart buildings solutions (IOT)**
- Secured end to end **encrypted communications**
- **All energies** and all usages managed
- Easy interconnection with **external platforms** via standard APIs
- More than **2 Million energy data** points managed
- **Comfort** improvement
- A team of **energy managers** to assist you in your projects

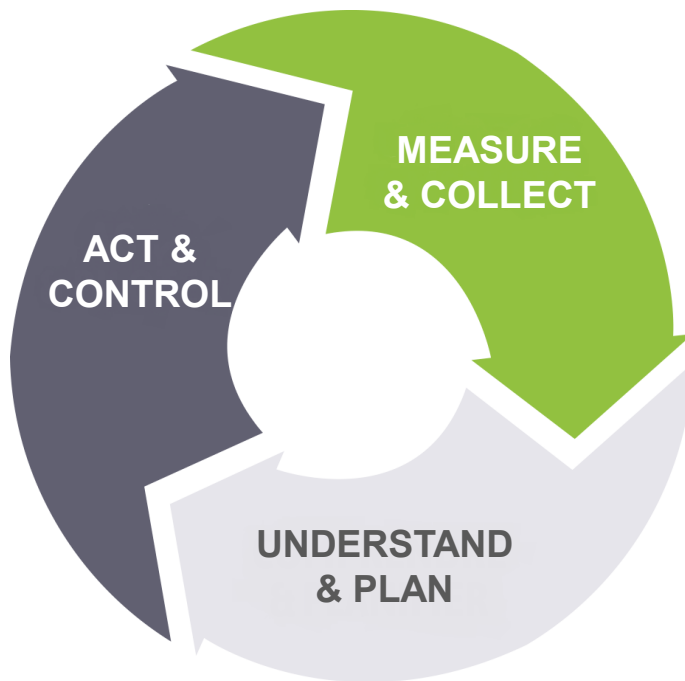

... providing several energy efficiency offers ...

... to help you become more efficient

- Deployment of **IOT solutions** to control different usages (lights, HVAC, IT, ...)
- Detailed measurement of actions
- ROI analysis

- Large data volume integration (**Big Data**)
- Automatization
- Centralisation
- All formats
- All energies

- **Energy data analytics**
- Comparison of buildings and drifts identification

- 2/3 years history
- Setting of priorities
- Definition of energy action plans

Energy bills easily managed and controlled

Up to
10%
savings

- **Easy upload** of all energy consumption data
- **Any format**, coming from different sources
- **Automatic connection** to energy providers portals
- Historical data integration, and **errors analysis and recovery**
- **Simple** and **synthetic** dashboards
- **Easy analysis** per type / site, and detailed reporting
- Identification and **fixing of energy drifts**
- **No initial investment** (gain sharing model)

Your buildings get smarter and more efficient

Up to
40%
savings

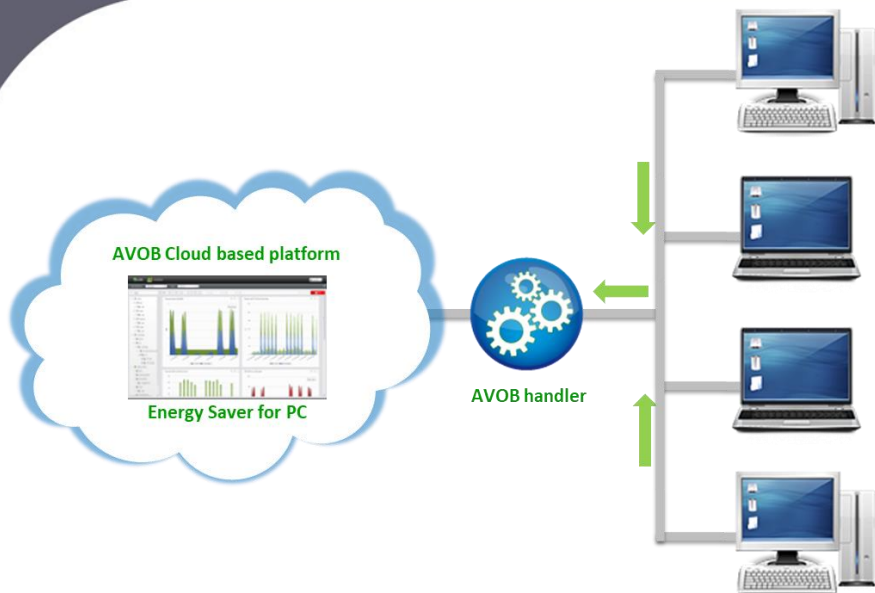

- **Remote metering** of all energy consumptions
- Detailed **monitoring per application**: lighting, heating, ventilation, cooling, IT network ...
- Per Zone/building/site
- **Wireless** communication to field devices
- Integration of **renewable** energy systems
- **Intelligent control** based on predefined policies
- **Energy alarms** handling
- Setting and follow up of **energy action plans**
- **Budgeting** and planning

Your IT network gets Green

Up to
50%
savings

- Detailed **monitoring** and **control** of workstations
- **Hourly policies** defining wake-up and stand-by per workstation
- Detailed **reporting on savings** done per site, type of equipment, ...
- PC Software updates **optimisation**
- **Improvement** of PC performances and availabilities
- Users, rights, and asset **management**
- Dedicated **widget** to involve user and provide feedback

Our energy services

- One single platform for all your energy information

- ✓ All providers
- ✓ All energies
- ✓ Adapted dashboards
- ✓ Predefined reports
- ✓ Alarms generation and handling
- ✓ Rapport prédéfinis

- Dedicated Energy Manager

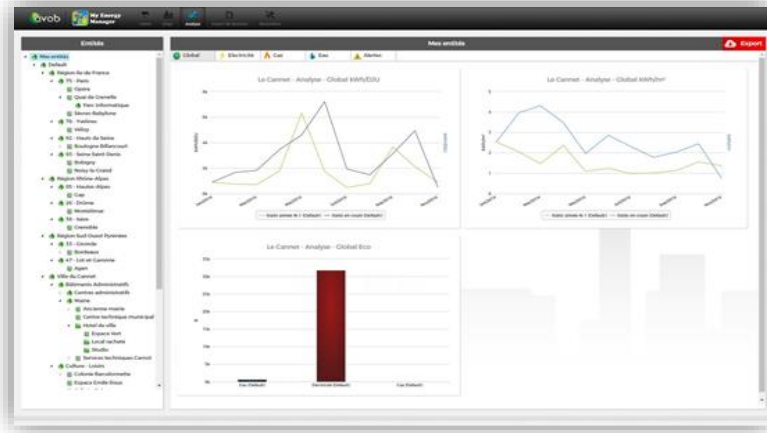

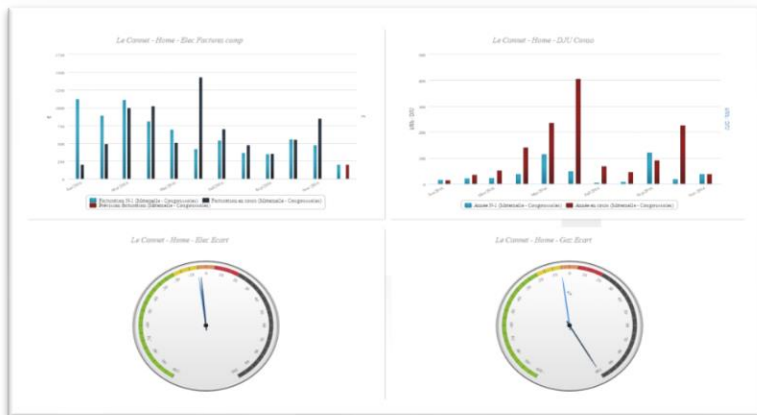

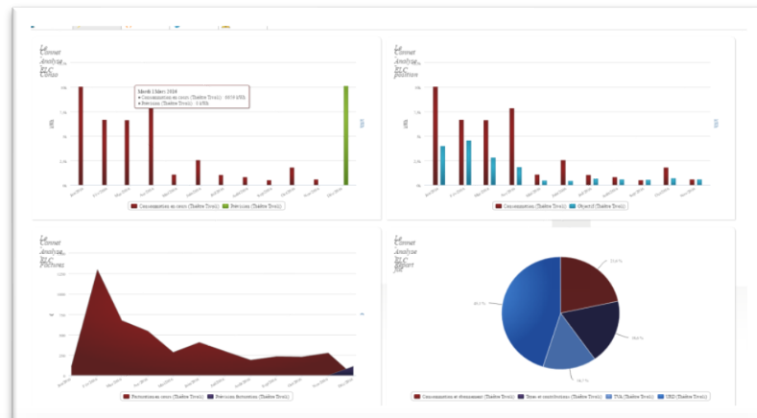

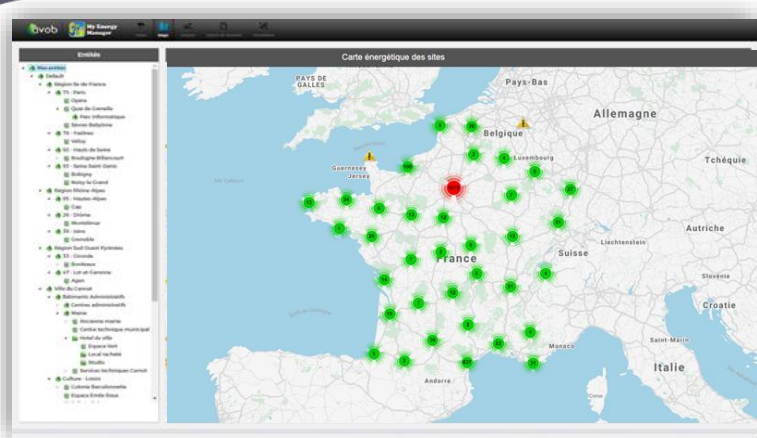

- ✓ Single point of contact
- ✓ Detailed analysis and advises
- ✓ Specific reports
- ✓ Interface towards energy providers

- AVOB Energy Club

- ✓ Participate to AVOB's roadmap
- ✓ Customized offers
- ✓ Energy Manager Contest

Examples of some dashboards

Key benefits and differentiation

Customer benefits

- **Short pay back** (8 to 14 months)
- Up to **40% savings**
- **Comfort** and work environment improvement
- **Simple** integration of various data sources
- **Easy reporting** capabilities

Differentiation

- **Easy** to deploy, **easy** to use
- **Adaptive** to various technical environment
- **Energy support** services
- Help customer **from A to Z** on its energy efficient journey

We bring tangible results to our customers

Auto consumption
Micro Grids

Impact of AVOB solutions since 2016 (EU)

Results

Equivalent

8 M€

Annual consumption of a
city of 10 000 people

90 GWh

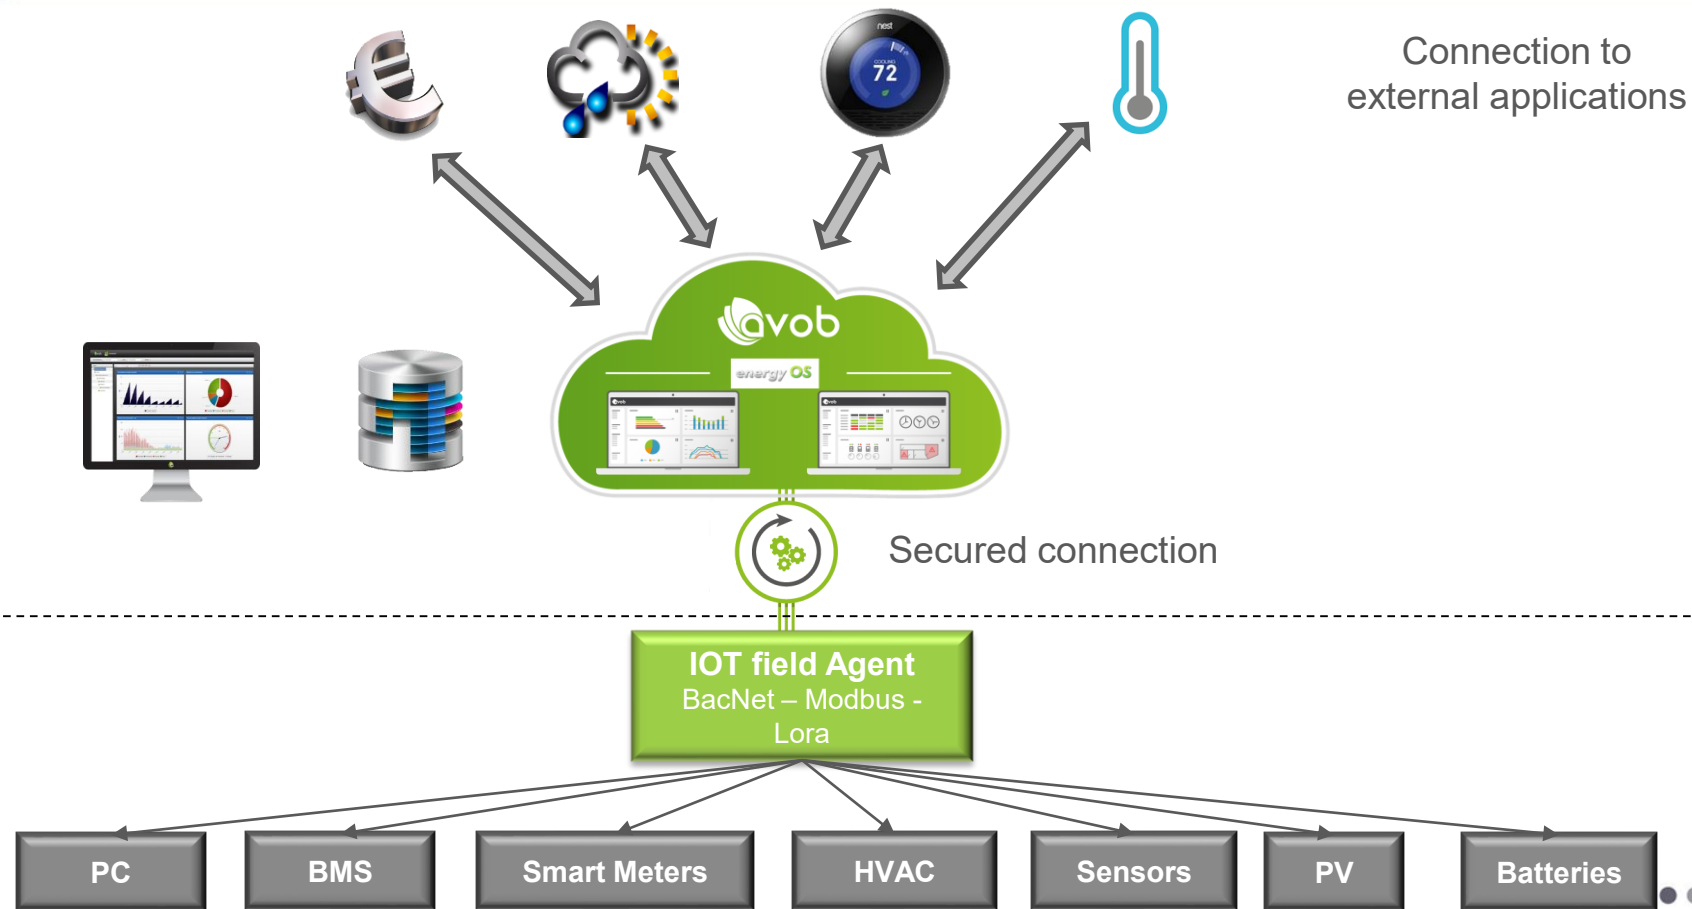

73 millions of Km
avoided by car or
7 000 cars avoided
during 1 year

7 300 tons

... delivered through a flexible architecture, ...

... to maximise data utilization and create advanced services

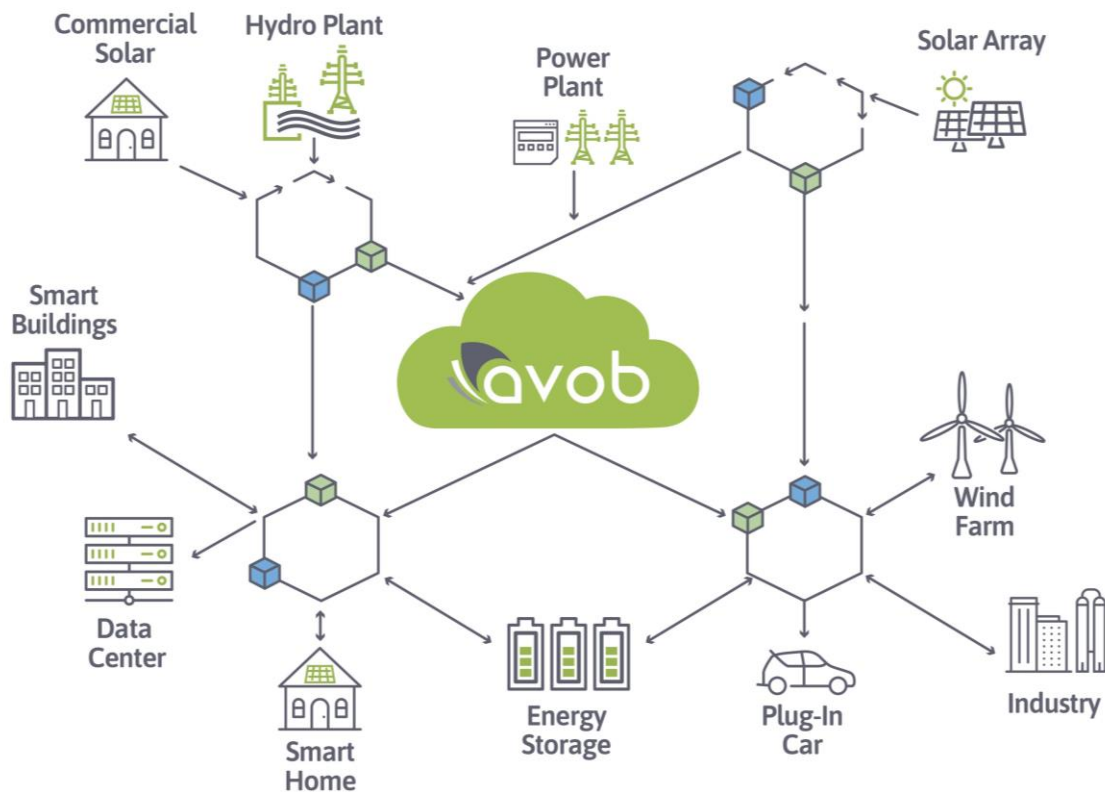

- **Energy Efficiency** : « Monitoring & Control » on more than 1000 types of devices preset in the platform.
- **Smart city** : easy connection of the various buildings types and consolidation onto the Smart City Platform. Monitoring and control of the different usages.
- **Micro – grid** : advanced algorithms to manage grid injection / self consumption / storage / sharing within the micro-grid district.
- **Load management**: Diffuse capacity aggregation, execution and acknowledgment of peak shaving orders, results verification and reporting.

Projects already started with international players

Expansion towards Smart Grids solutions

1

Efficient solutions to reduce energy consumption

2

Customers energy patterns management

3

Demand Side Management (Real time communication and control of consumption vs production)

The company

March 2009
