

**Simple 5 about us and our project:
GEPS – Global Enviro Patrol System**

Who we are ?

We are HWI – GEPS (ngo). HWI - GEPS is focused on high dissemination of informations about positive measurements, arrangements and daily practices of sustainable life on the Earth.

What are we doing ?

We educate, inspire and motivate citizens to involve these positive measurements into their own life and daily practice. We plan to help them (citizens) to perform these measurements and operative rules correctly, automatically and long term.

How we do it ?

We are building a network of local cells created by one or a few adults and more young students. The cells – PATROLS, will be long term active among the population, in order to achieve the main goal - a sustainable way of life in the households, in the location, in the region, in country. Our Patrols will have direct contact on parents of students, therefore we count to contact 70 % of population in the country. *The members of Patrols will be also active in other families – which do not have students in this time.* We plan **in minds of people to destroy fault pillars of human Identity** – which are the source of our current common destructive and exhaustive behavior of human society.

Who are we doing it for?

For all living organisms on the Earth, because we all are connected together and we all have to be responsible and involved in the fight against the Clima Change and in Environment save and care.

Why are we doing this ?

Because we believe that the next generation has the same right to live now and in the future as our generations until now. Because we lost to much time without maximal effort! Due this we believe, that it is the high time to do everything possible and we believe that we are able to do it. And we believe that if this (our) generation is responsible for the current situation, this generation must make maximal effort and play its part role in ensuring the survival of future generations.

What to do now?

We have prepared usefull project – for brighter dissemination of positive measurements and daily actions for sustainable lifestyle – in the „whole“ population.

We plan to significantly improve all current activities – with the better involvement of all citizens, but also the companies, organisations and public institutions. We plan to involve and activate more young people to put pressure on adults to follow the necessary measures and practice and help them do so. Thanks to it to achieve main goal: To save good life on the Earth.

As far we know, you are working in this segment, therefore we are contacting you.

We are not sure what we could offer to You as a reward, because we are a small asociation and only at begin of our journey...Probably only the good feelings that you will have helped us to improve our „Citizen Change Process“. Or of course – the possibility to take our system and use it and spread in your country. We understand that this our letter could be a surprise for You – Please, pass this letter to responsible persons, and please read it carefully and to think carefully about it and then let su know Your opinion on our possible cooperation. Then we will share more details with You, (our project has more then 66 pages) and we could make agreement about the way how you will be able to support us.

We are looking for our next cooperation.
