

## CUSTOMISATION

**The InoLock range will match perfectly with your exterior**

Our top range doors and shutters will satisfy you and give image you have been looking for a long time.

Colors, handles, glazings: find out all possibilities offered by SEDIPEC and choose your door safely among refined, contemporary or traditional styles.

Fully reflecting your personality, our anti-flooding protections will give character to your home.

100% French production  
in Centre Val de Loire region

Our devices are  
100% recyclable

## SUPPORT

**SEDIPEC**  
SMART BUILD TOGETHER

**Do you know that your vulnerability-reducing works to flood risks can be subsidized up to 80%?**

We can help you to finance your works of vulnerability reduction by directing your research by informing you at all levels : local, departmental, regional, national, and European aids.

We also propose a personalised service to find appropriate assistance for your situation by assisting you in preparation of grant application files.

To this end, we implement a 3 steps rigorous and precise method :

- A free pre-diagnosis without obligation
- Carrying out an audit of aids that concern you
- Preparation of your grant application files

ANTI-FLOOD  
SHUTTERS AND DOORS**

## SIMPLICITY FOR EFFICIENCY

We wish that every citizen can feel safe at home or at work.

Feedbacks from disaster victims were used to design InoLock product range.

Technically, our patented solutions have been tested in real conditions to cope with all situations.

- They have excellent shock and pressure resistance and are sustainable.
- They are hermetically sealed on the entire opening to be protected.
- They are intended for all types of openings. They can be adapted to houses, public buildings, high schools... whether for new or renovation.

# InoLock

## ADVANTAGES OF INOLOCK SOLUTIONS

### 01. CUSTOM FABRICATION

French custom-made production a adaptable to all needs.

### 02. CUSTOMISATION

Classic, contemporary or traditional styles to choose from and unlimited customisation.

### 03. SAVES ENERGY

Excellent insulating properties due to low thermal conductivity.

### 04. WATER AND AIR WATERPROOF

99.9% waterproof : a seepage may be caused by the occasional deformation of the material following a violent impact or by handling of the handle in case of flooding greater than 1 meter

### 05. INCREASED PROTECTION AGAINST BURGLARY

3 points lock that offers optimal security and deters burglar.

### 06. HEAVY-DUTY

Shock resistance higher than 600 joules and more than 1000kg/m<sup>2</sup> of force.

### 07. OUTWARD OPENING

Keep burglar from breaking in the door.

### 08. NO MAINTENANCE AND ROTPROOF MATERIAL

Composite material is very resistant over time and cleaning with clean water is sufficient.

### 09. REDUCES NOISE POLLUTION

Good noise insulation.

### 10. HEALTHY AND ECOLOGICAL

No emanation, 100% recyclable, with very low energy, water and fossil resource requirements.

## TOWARDS INDEPENDENCE OF OUR PROTECTIONS

In order to increase efficiency and reactivity, we can connect our protections to local alert system to give your home a real survival instinct.

As with the principle of a « fireproof » door, our protection shutters and doors can be closed automatically by distance when an alert is given. Thanks to a smart camera network placed upstream the cities, we are able to analyse the watercourses evolution and send a signal to our customers whenever a flood alert is given.

Their role is to protect all openings in your home without your intervention before flooding occurs.

### Interests:

- Anticipate danger by activating protections independently.
- Plan as well as possible preventive actions in case of evacuation.
- Minimize the damages during a runoff or a flood passage.
